It was without doubt the most magnificent costume ball given in Washington in years and will long remain in the memory of the guests which inguide Washington's elite; all of the most exclusive of Washington's inner circles. Many prominent people from other cities came to Washington just to attend the alluring spectable presented by society folk and for society folk.

The arrangements for the ball were along the lines of similar events for the same benefit given with great success in New York and other cities. Big Changes May Result from New-Made Fuel.

Converting bituminous coal into an equivalent of hard coal is a late development, described in the Pop-ular Mechanics Magazine, that will have a far-reaching effect on American industry. The new fuel is en-tirely smokeless, and under the new process by-products now wasted are recovered. These largely compensate for the cost of conversion. A plant has been in operation in the East for some time, perfecting the process and making tests of a practical char-acter. The raw coal is subjected to acter. The raw coal is subjected to distillation process at low temperatures, the residue being pressed in-to hard, durable bricks that are again subjected to distillation and produce an intense heat.
